Nucor Steel – Arkansas Customers

Subject: Recycled Steel Content

Dear Customer:

Nucor Steel – Arkansas produces a wide range of coiled steel products. These products are 100% melted and manufactured in the United States of America using the electric arc furnace process. This process combines scrap metal along with various scrap substitutes to create liquid steel for casting and rolling steel to customer specifications.

In 2009, we produced our steel products with over 64% scrap metal. This kept over 975,000 tons of metal out of our nation's landfills and provided an outlet for abandoned cars that might otherwise blight our scenic landscape.

As the largest recycler in America, Nucor is a proud leader in preserving our natural resources for future generations.

Sincerely,

A handwritten signature in black ink, appearing to read 'Wayne D. Turney'.
